## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments filed on 9/3/2004 have been fully considered but they are not persuasive. Carlson et al. disclose the required divalent ion doping, i.e. calcium doping of the silicon oxide that's used as the barrier layer in columns 5 and 6 and it is clearly specified further in claim 8.

### ***Allowable Subject Matter***

2. Claims 1-3, 5-8, 10-13 and 15-17 allowed.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 18-22 rejected under 35 U.S.C. 103(a) as being unpatentable over Marieb et al. (US 2002/0076925) in view of Carlson et al. (3,632,438).

Regarding Claims 18-22, Marieb et al. disclose copper alloys for interconnections having improved electromigration characteristics and methods of making same where formation of copper alloy interconnect lines on integrated circuits includes introducing dopant elements into a copper layer. Copper alloy interconnect lines may be formed by providing a doping layer over a copper layer, driving dopant material into the copper layer with a high temperature step and

polishing the copper layer to form individual lines. Marieb et al. fail to disclose the required divalent ion doping of the barrier layer. However, in Claim 7, Carlson et al. disclose the required divalent ion doping of the barrier layer.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required barrier layer doped with the divalent ions in Marieb et al. as taught by Carlson et al. in order to have a copper interconnect structure with higher reliability.

### ***Conclusion***

2. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
